Subject (9088037) Vapor Intrusion Action Levels

George. Thanks for talking to me yesterday about action levels for remediation of homes where there is PCE/TCE found in the home. This is a big issue for the Branch as we prepare our plan for remediation of the DelFasco site. I understand that here is a national workgroup looking into this issue but I am told by staff that action levels being used/considered around the country literally range from .337 to 100 micrograms/cc. I would like to request a consultation from ATSDR on the action level that you would recommend.. Please let me know if you want to meet to discuss with me or my staff or if I need to make this request in a different manner..
